THE

LITTER BIN & ASHTRAY

CATALOGUE

Introduction

Litter bins - Ashtrays - Metal fabrications

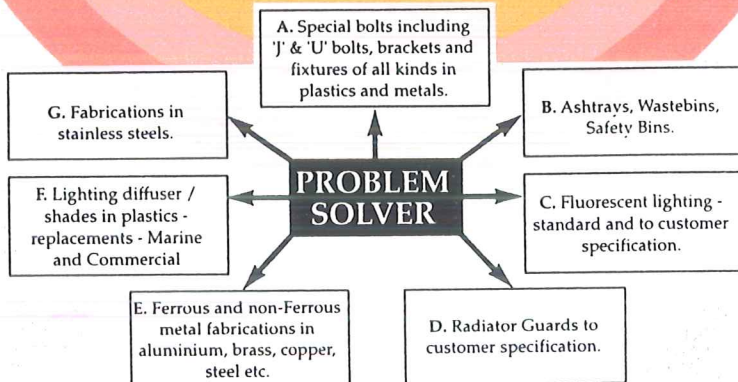

Equipment for safety and cleanliness is most likely a priority consideration in many businesses and other places where people forgather for entertainment and leisure or just pass through. Many men and women enjoy their cigarette, cigar or pipe, and some are not always careful with the ash and ends.

At Akeron we have made it our concern to design attractive and safe ashtrays. This catalogue describes a variety of routine production models, although designs and features to customers specifications are frequently undertaken.

May we draw your attention to Model No. 58 for mounting on to wall or seat backs and the combined Litter-bin / Ashtray Model No. 13 designed for integration into public areas, lounges, licensed premises and dining rooms. Model No. 7 suitable for landings and passageways, attractively finished in black and chrome or other colour finishes.

An interesting, fairly recent addition to our collection is the versatile Model No.24 cylindrical upright bin. Selections can be made from six variants of this 24" x 9" diameter model by subtraction of certain components according to requirements. Basically the model No. 24 is a straight forward litter bin. Add an ashtray section a few inches under the top cover and it serves the dual ashtray / waste bin function. Add one of two different anti-fire devices and this will secure the bin and its immediate surroundings from ravages of accidental fire that might develop from someone throwing a cigarette end into the rubbish section of the bin by mistake.

Perhaps the safest of all ashtrays is Model No.59P 'Honeycomb' style table ashtray (in either high grade plastic or chrome) improves the safety level of any environment in which it may be placed : in passenger, freight and tanker vessels, as well as in the accommodation units of off-shore oil rigs, offices, places of entertainment and leisure, restaurants and pubs.

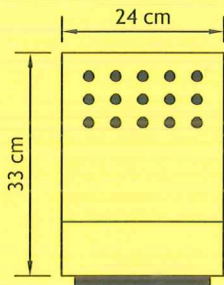

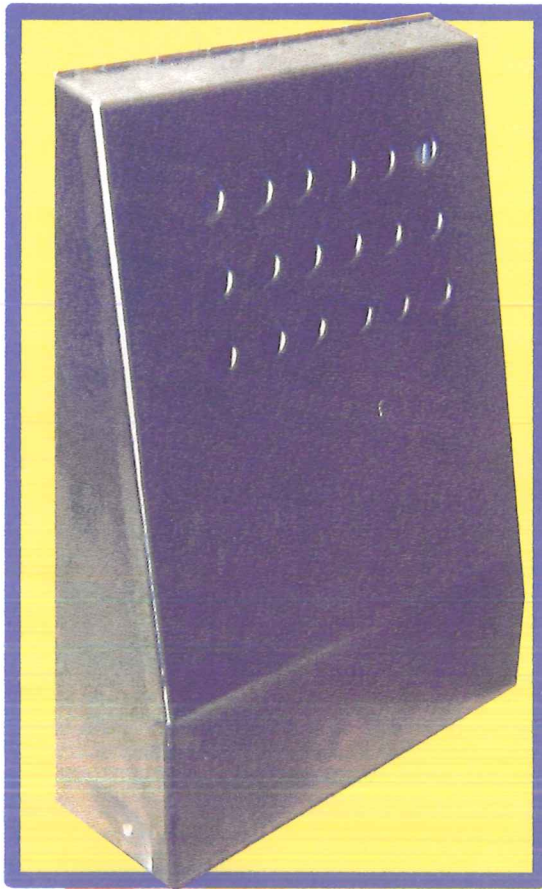

Safety Wall Ashtrays

Post your cigarette before entering

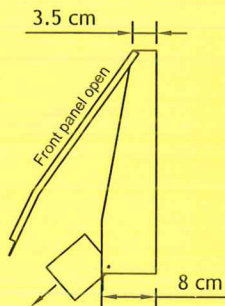

MODEL 75

The new style safety ashtray bin incorporating the easy to empty and clean waste tray. this bin has been designed for exterior wall mounting at 'strategic' positions of a factory and business premises. To Enable staff and visitors to cease smoking and dispose of their part smoked cigarette safely before making an entrance. In this way the bin takes in a form of waste which would otherwise, most likely be thrown to the ground presenting an irritating untidiness at entrances.

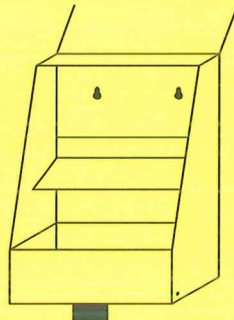

- * A discreet size and attractive design.
- * An internal 'suffocating' flap to exclude air thus ensuring safety against fire.
- * Internal swivel action tray for easy emptying and cleaning.
- * Stainless steel or mild steel powder coated for a durability and appearance in all weather conditions.
- * Also can be supplied to customers specified dimensions.

Front panel opened up showing cigarette collection tray & air restrictor

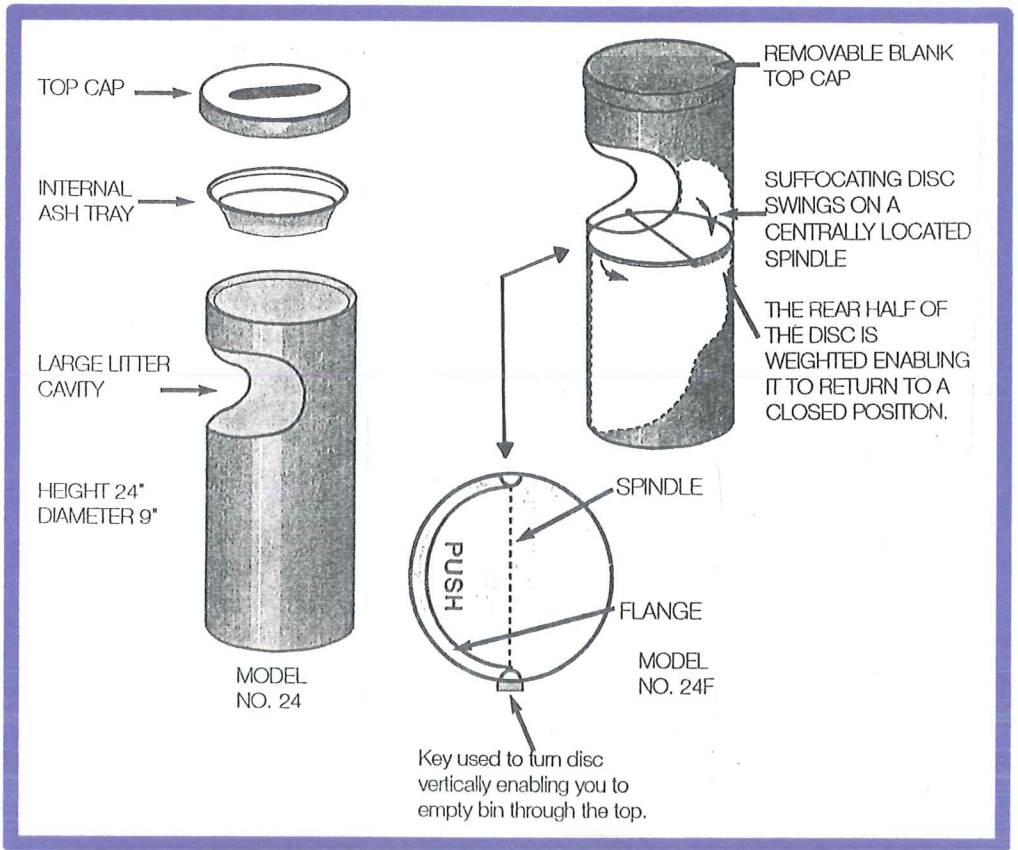

Safety free standing Ashtrays

MODEL 76

Designed with the 'conical' head is a variant of the Akeron square section and cylindrical ashtray/waste bin free standing floor models for passageways and corridors. For a number of interior locations as required in hotels, leisure complexes, offices, factories and many other locations where people forgather and pass through. The waste tray is positioned at the base of the square section body. For emptying and cleaning the waste tray can be removed and replaced easily by opening a door at the rear of the bin. Both models can be supplied in stainless steel or mild steel powder coated. In both cases ensuring durability and an attractive appearance. Body 5" square, box section 33" high & 'conical' 4" high. Also can be supplied to customers specified dimensions.

Versatile Ashtray/Waste Bins

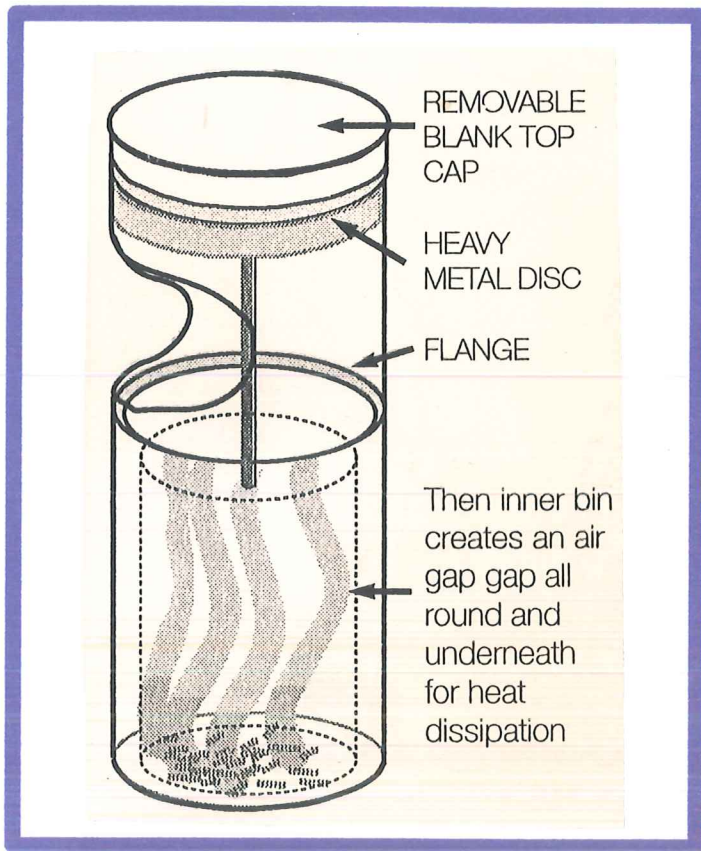

MODEL 24

Quite without thinking a person could throw a smouldering cigarette end into a bin intended for LITTER ONLY - thinking the cigarette end is 'dead'. According to the position of the bin any fire that might occur from a smouldering 'end' in contact with dry paper rubbish might have more serious consequences than just a fire in a bin. For example if the bin is positioned in a clear space the rubbish could burn out without problems, but should the bin be close to a wall, (especially one on which notice boards are fixed), shelves, a desk, or factory bench for example, it could be the start of a major destructive fire.

The basic Model No. 24 cylindrical bin is convertible from a Litter Bin ONLY (No. 24LO) to an Ashtray/Litter Bin (24AL) or in each case to either of the following to include a Fire Resistant mechanism - Models No. 24LOF or Model 24ALF suffixed by / S or / T to determine type of anti-fire device.

Waste Bin

**Fire
Resistant
Litter Bin**
With fire
'Suffocating Disc'
Or with 'Thermal
Reaction device'

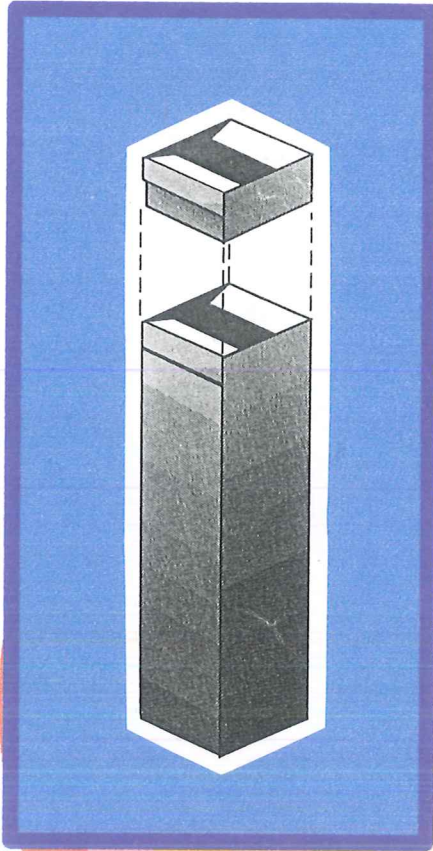

MODEL 24 series cylindrical bins

The model number 25 LITTER BIN uses the same cylindrical body as the Akeron 24F fire resistant LITTER BIN incorporating the 'suffocation disc' anti-fire mechanism. In this model (24F) it is a case of 'prevention is better than cure'.

A different, but nevertheless effective method is employed in Model 24 fire resistant LITTER BIN. In this case a fire must occur first. The heat generated will then activate a thermal device causing the release of a heavy metal disc to fall upon a flange surrounding the interior of the bin thus sealing the fire from the outside air.

After operation the thermal device has to be replaced and the disc cleaned and re-set.

Waste Bins / Ashtrays

MODEL 7

A smart square section waste bin / ash bin with detachable bright stainless steel ashtray as top.

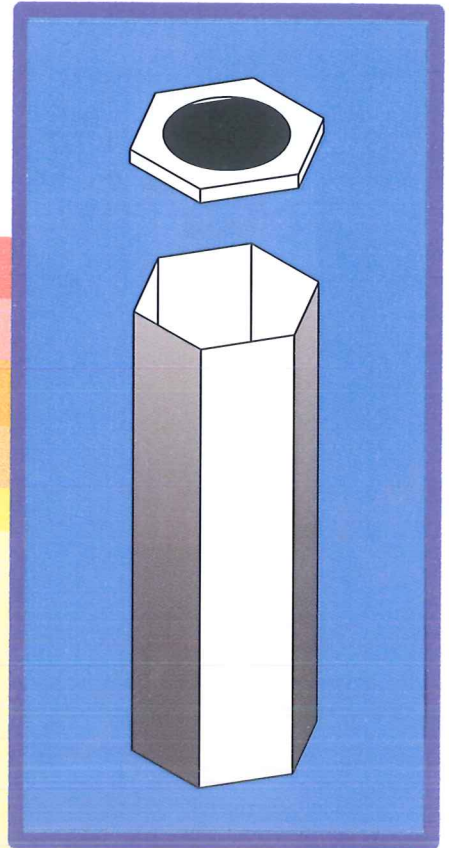

Dimensions : 21" x 6" x 6"
